**High-quality  
production of  
body bags**

## About Polcreative Group

---

After a long career in the funeral industry, Herman van Loon founded Polcreative in 2010: "In a modest 350 m<sup>2</sup> hall and with 8 members we started producing body bags, specially designed for hospitals, funeral homes and international aid organisations. In 2012, the daughter, Heidi van Loon, joined the company.

By 2016, the company had already grown considerably. Therefore, Polcreative expanded its manufacturing operations and occupied a production area of up to 1,000 m<sup>2</sup>. In 2020 Heidi took over the company and changed the name to Polcreative Group. In 2023 we bought a new ground to extend our production and warehouse.

With more than a decade of experience, we have since built an excellent reputation in the funeral industry. With more than 30 employees and a working area of more than 1000 m<sup>2</sup>, we have become one of the leading companies for bodybags across Europe.

### Why choosing us?

**High quality:** As a major European manufacturer, we only work with the best international suppliers and materials.

**Tailor-made:** Each body bag can be fully customised to your specific requirements.

**Large stocks and fast deliveries:** Our large stocks of body bags are available in both big and small quantities. You can be sure of a wide range and efficient logistics.

**Eco- friendly:** We do our best to always find environmentally friendly and sustainable solutions at every stage of production and distribution.

## Standard Body Bags

Our standard body bags are made from PE foil and supplemented with specific additives to mimic biodegradation, causing a fragmentation of the materials.

This type of body bags are used mainly by hospitals and funeral homes, with the help of a stretcher.

The length can be customised.

## Biodegradable Body Bags

Biodegradable means that there is a **biological** decomposition of the material into CO<sub>2</sub>, water and minerals. The material will disintegrate within 12 weeks and must be at least 90 % biodegraded within 6 months, following the norm EN 13432 in soil.

This type of body bags are used mainly by hospitals and funeral homes, with the help of a stretcher.

It is possible to customise the length and width.

It is available in white, with a straight zip (100µ) or a U-shape zip (150µ).
